Visceral disease

Infra-inguinal Bypass

VENOUS PROCEDURES: YES

Including deep venous recanalization and stenting

VASCULAR ACCESS: NO

NON-INVASIVE VASCULAR DIAGNOSTIC (eco-Doppler): NO

CUH is the designated arterial centre for a network covering West Suffolk NHS Trust, North West Anglia Foundation Trust (incorporating Peterborough and Hinchingsbrooke Hospitals) and part of the Queen Elizabeth Hospital, King's Lynn catchment. The overall catchment area is around 1.8m and the unit is a high volume arterial centre performing around 200 aortic interventions, and 100 carotid procedures per annum.

There are strong, close, working relationships with Interventional Radiology, with a complex EVAR clinical service, and an established deep venous stenting programme. Dedicated multidisciplinary diabetic foot services are established in CUH, West Suffolk Hospital and Peterborough and there is further opportunity to enhance such

delivery at the spoke hospitals. The unit is supported by an excellent, 5-scientist Vascular Studies Unit, and a large, dedicated Vascular Ward, and a new hybrid operating theatre.

All the surgeons spend one day at a spoke site. The successful applicant will be based at both CUHFT (80%) and West Suffolk Hospital (20%).

There is an active clinical research programme and many opportunities exist in Cambridge for candidates keen to be involved in research. The hospital is at the heart of the Cambridge Biomedical Campus. Cambridge is a thriving city with a world famous university and excellent cultural and family attractions
